

# Security without compromise.

## What is StegoStik™ Enterprise?

StegoStik™ Enterprise is the most secure USB storage solution available today. Designed to meet the demanding security requirements of Public Sector organisations and Blue Chip companies it combines reinforced encryption technology with ease of use and simple deployment.

## Stronger Security

StegoStik™ Enterprise uses mandatory AES encryption, an internationally-recognised standard. This method is used by governments, militaries and police forces the world over and provides the best data encryption available today. Uniquely, StegoStik™ also employs Steganography to hide your encrypted data within a massive pool of random numbers. Two layers of security are better than one.

## Software-based Solution

StegoStik™ Enterprise does not store encryption keys on the device. This neutralises the threat of physical analysis of the device itself.

## Hassle Free

If your security is too difficult to use it won't be used at all. No matter how strong your encryption, your data could still be at risk. StegoStik™ products have an intuitive interface with little learning curve. StegoStik™ does not demand two adjacent drive letters, it requires no admin rights and does not need to be installed on a host PC. Simple.

## Trusted by Government Organisations, Police and Blue Chip Companies

The protection of sensitive data is crucial to our biggest clients who are entrusted with the personal information of millions of people. The consequences of having data lost or stolen can be embarrassing at best, catastrophic at worst. These organisations trust StegoStik™ Enterprise as a reliable solution to minimise this risk. Your personal and business information deserves the same protection.

## Flexible Deployment

StegoStik™ Enterprise has strong default security parameters. The StegoStik™ Toolkit lets you adapt these to your security policy, including setting an administrator passphrase for data recovery. This versatile utility, which runs on a standard PC, gives you central control without requiring an enterprise-wide network. It also lets you save your preferred security configuration for use during order production, so devices arrive ready to deploy. This is great for smaller organisations and yet supremely practical for larger roll-outs.

## StegoStik Limited

Empire House, 175 Piccadilly,  
London, W1J 9TB, UK

## Capacity

64MB to 4GB

## Dimensions

66 x 17 x 8.5mm\*

## Weight

8g\*

## Interface

Hi-Speed USB 2.0

## OS Compatibility

Windows 2000, XP, Vista

## Encryption

Mandatory 256-bit AES encryption plus Steganography

## Default security parameters

8 character passphrase, including lower case and numeric characters, plus 30 minute time-out

## StegoStik™ Toolkit

Provides local control of passphrase, file permissions, error detection and software version

## Warranty

12 months limited warranty

\*4GB: 74 x 19 x 8mm; 9g
